

GOANYWHERE SFTP

- Log into GoAnywhere
- Open your browser and type the URL “<http://169.254.166.33:8000/>”
- Provide the credentials and log in.
- Start the SFTP service which by default is stopped.
- Navigate to the Services page by selecting Services from the main menu bar, then click Service Manager.
- On the Service Manager page, you’ll see a list of GoAnywhere Services. Click on Action next to the SFTP Service, and then click Edit
- In the left-hand panel of the SFTP Configuration page, select Listener: default under the Server drop down
- Note down the port, it will show the default port which we have provided during installation.
- Click on save and finish
- Click on Action again and select start
- Cross check at dashboard weather service is started or not.

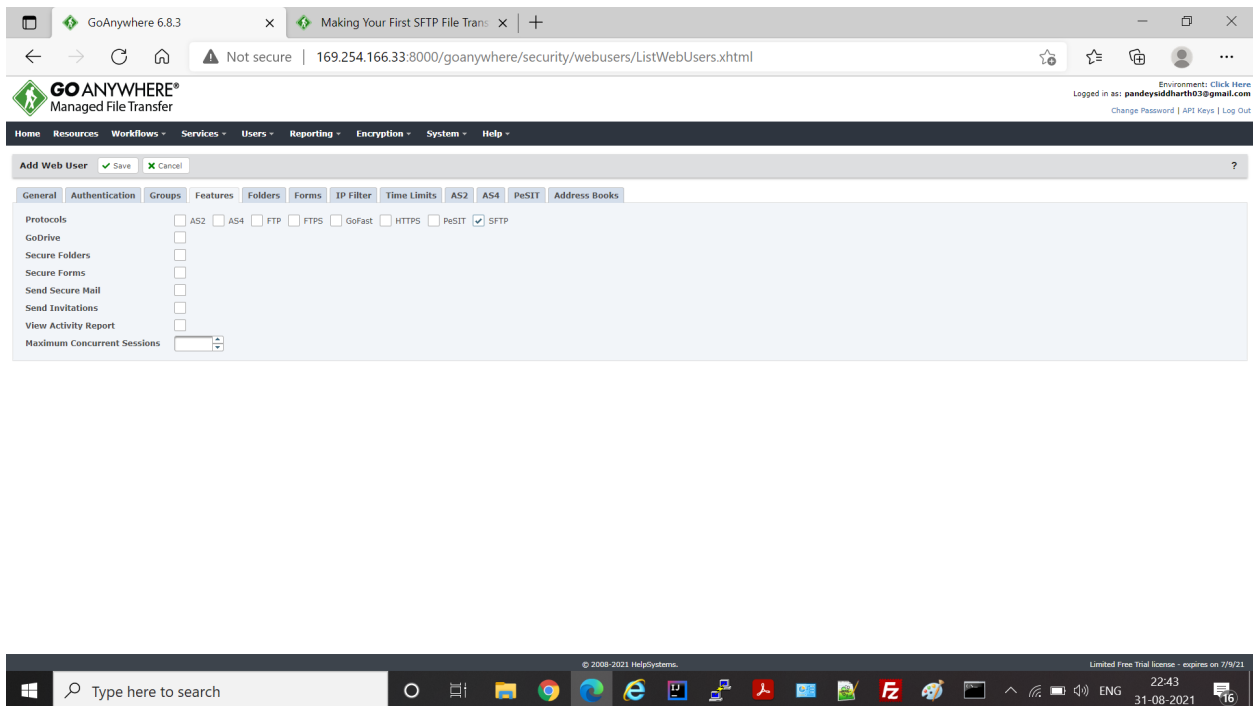

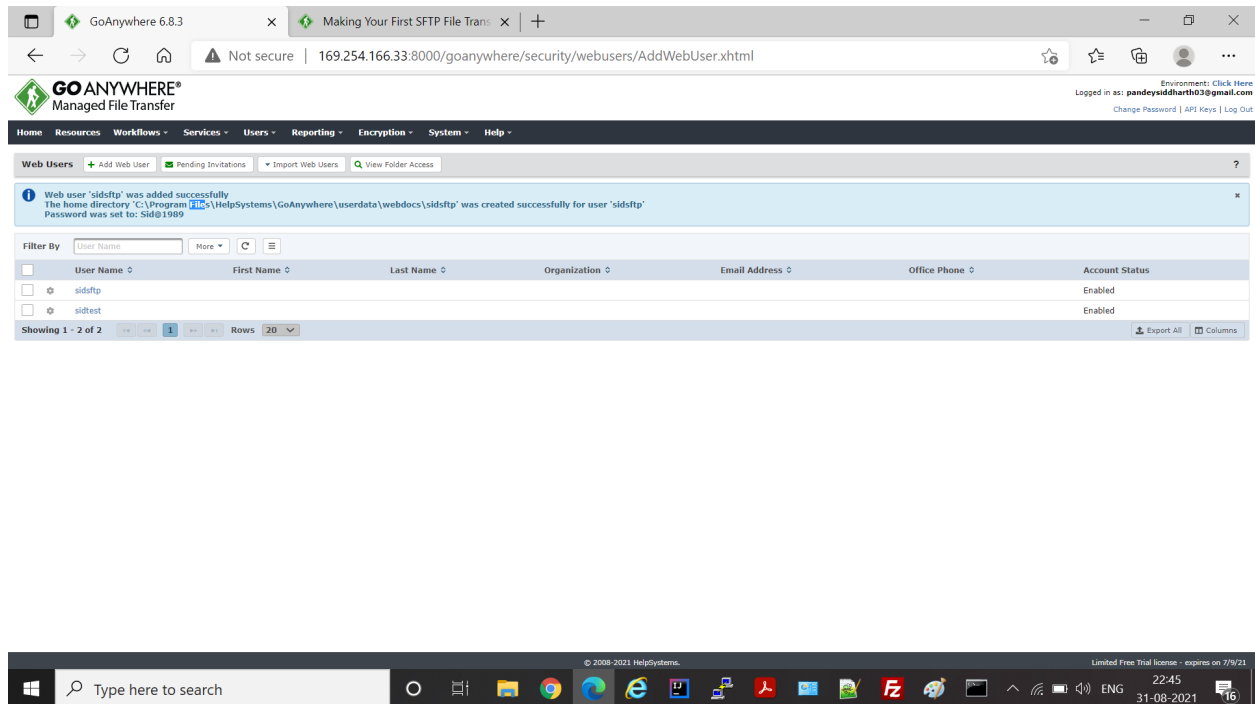

Create New User

- Navigate to the Web User management page by selecting Users in the main menu bar and clicking Web Users.
- Click Add Web User

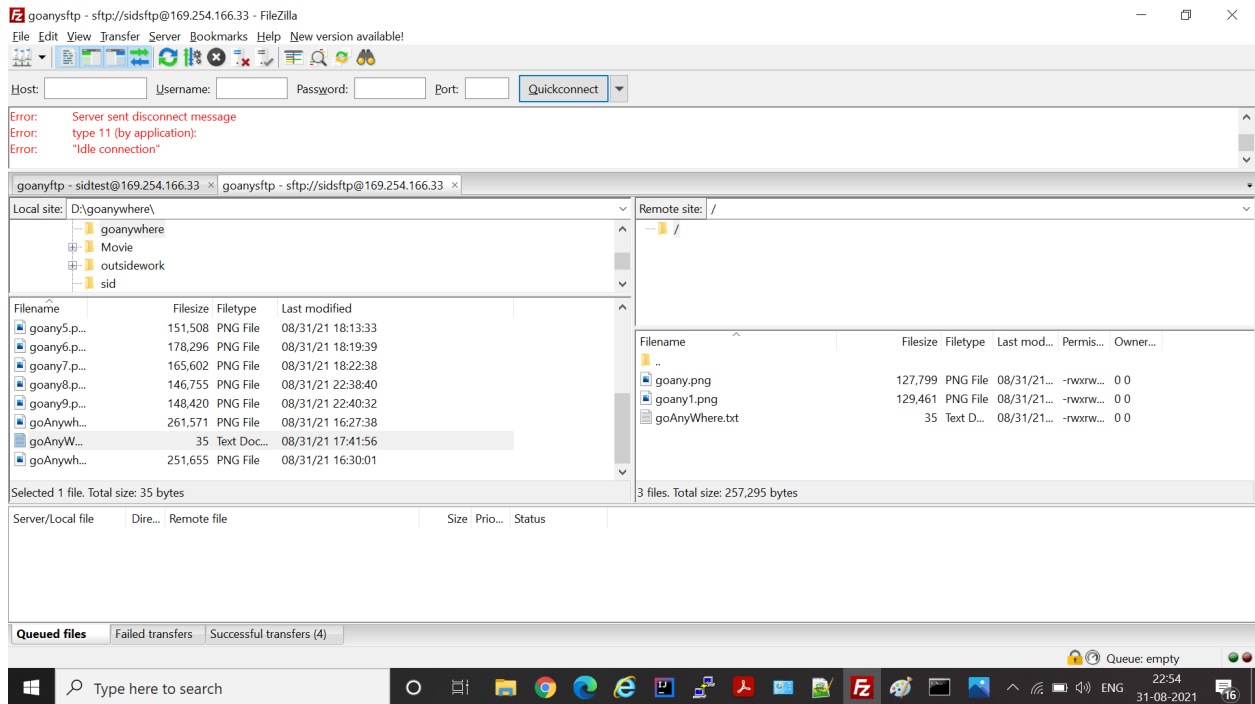

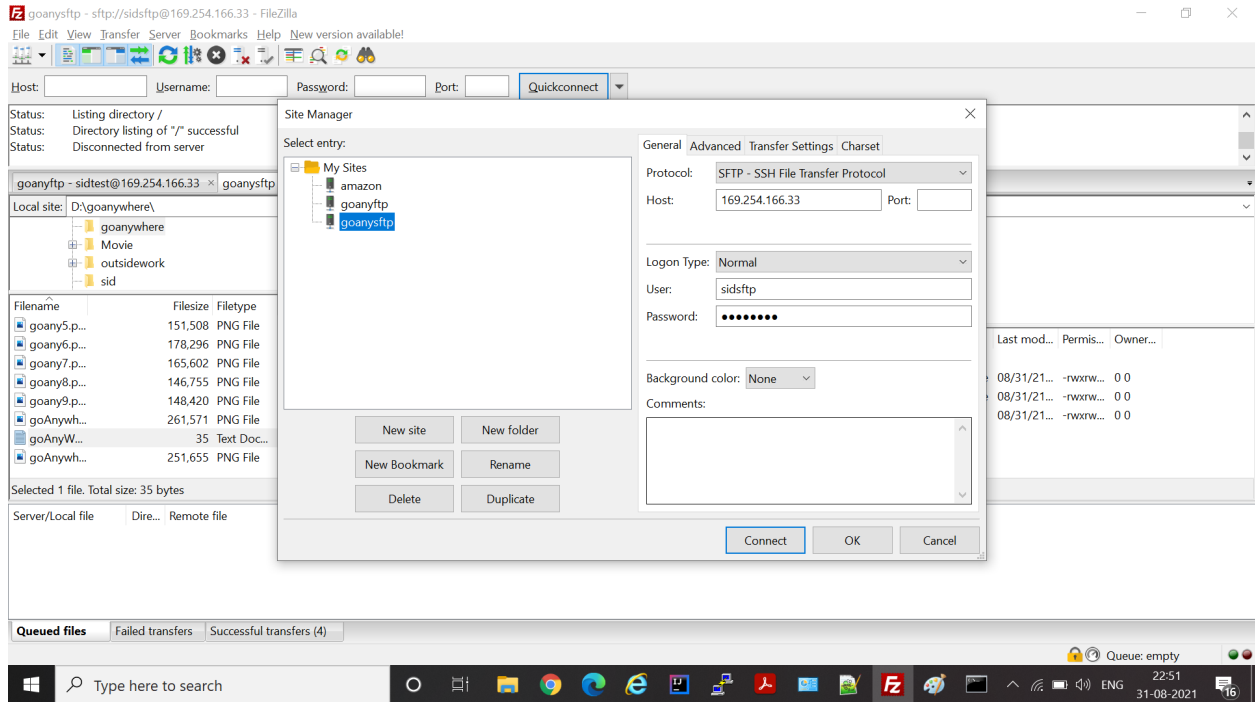

- Provide user name
- Provide authentication credentials
- Provide access to the GoAnywhere SFTP Feature
- Provide permission to upload files
- Click Save. The Web User's password and home directory will be generated by GoAnywhere and will be displayed at the top of the screen.

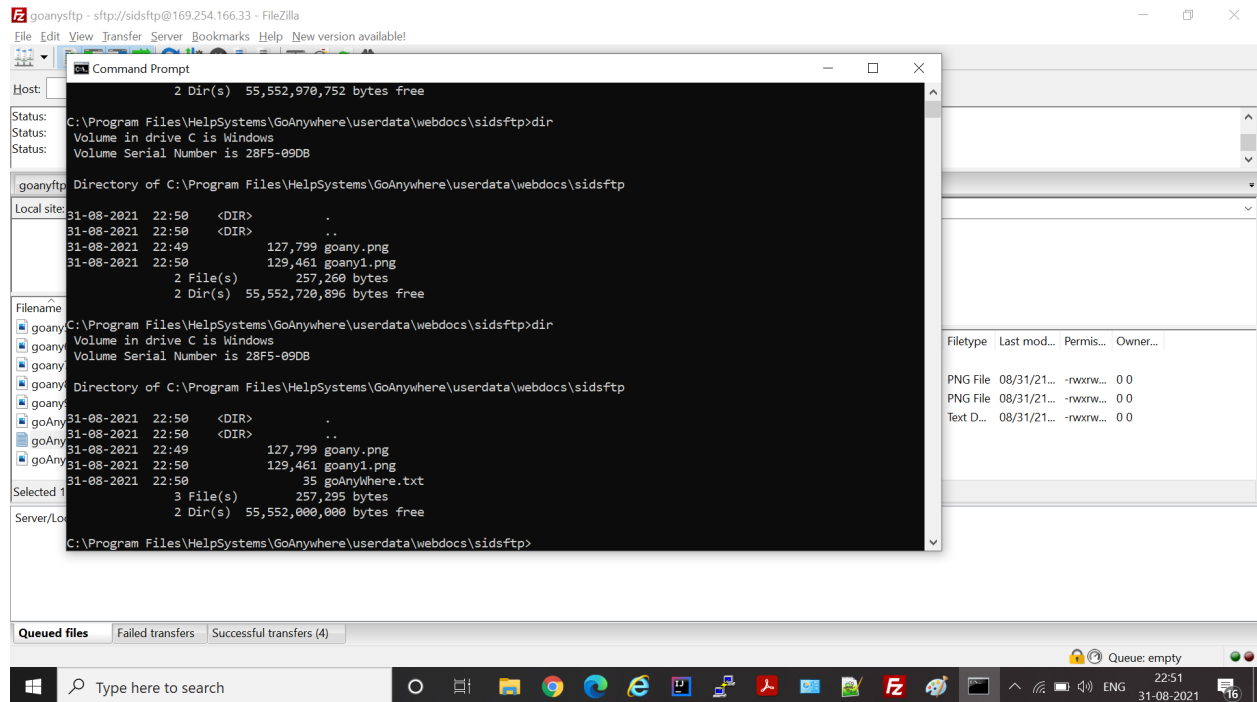

Ready to test the File Transfer

1. Click on File and select Site Manager.
2. Click New Site.
3. On the Site Manager screen, specify values for the following fields:
 - Host – The GoAnywhere domain hosting the SFTP service.
 - Port – The port assigned to the SFTP listener.
 - Protocol – Select SFTP – SSH File Transfer Protocol from the drop-down menu.
 - Logon Type – Select Normal for password based login, or Key file from the drop-down menu.
 - User – Enter the name of the Web User.
 - Password - Enter the Web User password.
 - Key file – If using a key file, navigate to the private portion of the SSH key pair.
4. Click Connect.
5. Upload a file using FileZilla.
6. When the upload is successful, navigate to GoAnywhere's [install directory]\userdata\webdocs\[user name] folder and verify you can access the file from the system.

SSH Key Based Authentication

1. Log in as an Admin User with the Web User Manager role.
2. From the main menu bar, select Users, and then click the Web Users link.
3. In the Web Users page, click the Action icon next to the Web User, and then click the SSH Keys option.
4. Import an SSH public key into the Key Vault for a Web User by clicking the Import Public Key button. Once the key is imported, it will become associated with the Web User account.
5. Click the Done button to return to the Web User Management page.
6. From the Dashboard, point to Security and then click Web User.
7. On the Web Users page, click the Edit icon next to the Web User.
8. In the Edit Web User page, click the Authentication tab and change the SFTP Authentication Type to Public Key or Password and Public Key.
9. Click the Save button.
